...ABSTRACT: using unattended answer files, OEM preinstall setup method, using the SYSDIFF tool and making an **image copy** of a fully **installed** system. Unattended answer **files** provide input to the normal windows NT setup program, but benefit from having hardware consistency...

... windows NT be the same for all machines where SYSDIFF difference files will be applied.

**IMAGE COPY**

Essentially, this **installation** method transfers **data** from a fully installed system to, a destination system. It can be implemented with simple

...

...drive duplication machines, which perform sector data transfer, or with

third-party tools that create **image copy files** of an installed system. The latter approach is used for duplicating multiple systems.

One of the most popular **image copy** tools is Ghost from Ghost Software (Milwaukee). It **copies installed** NT or Windows 95 system disks either to an **image** file or immediately to the destination system.

Like SYSDIFF, image copy installation requires consistent hardware...

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide a device for protecting copyright in a personal computer with which an audio file, etc., is outputted by protecting a copyright, when the audio file is outputted.

SOLUTION: An audio or image reproduction application program (A) reads copyright information from a medium and writes the information in a registry (storage means) (R). A device driver (B) reads the copyright information stored in the registry (R) and sets the copyright information to audio or image data which are to be outputted to the outside.

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide an image processing device that can conduct summing processing on a personal computer without causing image quality deterioration to an image file outputted from a digital camera.

SOLUTION: An image processing program 65 installed in a personal computer 2 reads a plurality of original image data 61 subjected to gamma correction processing by a digital camera and applies inverse gamma correction processing respectively to generate a plurality of linear image data 62. The image processing device applies interpolation processing to the linear image data 62 and applies composite processing including summing processing to generate composite image data 63. The image processing device applies gamma correction to the generated composite image data 63 and stores the result to a hard disk 24 as a composite image file 64.

#### ABSTRACT

PROBLEM TO BE SOLVED: To easily read images on documents different by classifications and to realize image reading which is superior in operability.

SOLUTION: A transparency image read start button 4 is provided separately from a reflection document image read start button 3 set on an image reader 1, and one of these buttons is operated according to the classification of the document of an image to be read to change the sequence or parameters of image reading software set on a host PC 7 or the like to those adapted to the document or select an image read software adapted to the document, and then the image is read. Consequently, a user retrieving image read software previously installed in the host PC 7 prior to image reading to consciously execute it is dispensed with.

#### ABSTRACT

PROBLEM TO BE SOLVED: To reduce the installation area of an entire image information reader as much as possible and to availably utilize space.

SOLUTION: This device is provided with a cassette loading part 20 where a cassette is arranged so that the recording surface of a stimuable phosphor

sheet 22 may turn downward, a sheet elevating part 50 for taking the sheet 22 from the cassette 18, a read part 60 for reading radiation image information in a state where the recording surface turns upward and an erasion part 58 erasing the radiation image information remaining in a state where the recording surface turns upward, and the loading part 20, the erasion part 58 and the read part 60 are arrayed in this order downward in a vertical direction.

#### ABSTRACT

PROBLEM TO BE SOLVED: To permit optimum index and preview display corresponding to the number of read images by providing an index display means for displaying a list of plural images and an index display changing means for changing the style of list display by means of the index display means.

SOLUTION: An image reader is composed of an image reader main body 1 and an image reading program installed in the storage device such as hard dish of a personal computer(PC) 6. Plural images such as film images are continuously read by the image reader, a file of respective image data is formed on the memory of the PC 6 and list display (index display) is performed on a display screen according to a style selected by a user. When any one of images of index display is selected, that image is expanded and preview display is performed.

# ABSTRACT

**PROBLEM TO BE SOLVED:** To enable the control of image data even without installing a control program for the image data.

**SOLUTION:** This image processor holds an image display program 201 together with a data part 204 for holding the image data as an image file 200. Thus, even when the application of image display is not installed in the image processor, by reading the image file 200 and starting its display program 201, the image data in the data part 204 can be displayed.

## Alerting Abstract US A1

**NOVELTY** - The method involves copying a build script from a network location to a computer readable memory of a target computer system. Installation software that corresponds to a program identified in the build script is copied to the computer readable memory. The installation software is installed on the target computer system to create the build image. The selection of installation option is assignable to the program.

**DESCRIPTION** - An INDEPENDENT CLAIM is also included for a computer system.

**USE** - Used for generating a build image (claimed) in a computer system.

**ADVANTAGE** - The method automatically installs the installation software on the target computer system to create the build image, thus reducing the installation time.

**DESCRIPTION OF DRAWINGS** - DESCRIPTION OF DRAWING - The drawing shows a flowchart of the steps performed in the automated creation of image builds.

**Alerting Abstract** US A1

NOVELTY - An single image of a pre-configured reference system is copied to a storage medium of a destination computer to stage several programs on the computer. The staged programs are selected by user for installation on the destination computer.

DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- 1.computer readable medium storing instructions for programs installation method; and
- 2.computer configuring system.

USE - For installing user-selected programs on destination computer to configure end-user computer by original equipment manufacturer (OEM) or other system builder.

ADVANTAGE - By staging programs on destination computer using pre-configured reference system image, time taken to produce customized machines is reduced, considerably. Provides significant cost savings in maintaining the reference system image, and facilitates updating the operating system and other programs. Provides a controllable environment in which original equipment manufacturer can script the installation of programs on the target computer.

DESCRIPTION OF DRAWINGS - The figure shows a flow chart illustrating the programs installation method.

**Title Terms/Index Terms/Additional words:** USER; SELECT; PROGRAM; INSTALLATION; METHOD; ORIGINAL; EQUIPMENT; MANUFACTURE; STAGE; DESTINATION; COMPUTER; PRE; CONFIGURATION; REFERENCE; SYSTEM; IMAGE

## Alerting Abstract US B1

NOVELTY - An image (406) of a client (402), that is stored in a server (400), is copied onto another client (416). The application of the copied image is installed in the client (416) and the image of the client (402) is updated. The updated image is sent back to the client (402).

DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- 1.distributed data processing system; and
- 2.computer program product for installing an application on a client computer.

USE - For installing application in distributed data processing system (claimed) implemented as local area network (LAN), intranet, Internet, wide area network (WAN).

ADVANTAGE - The installation consumes less time as the installer does have to travel from one computer to another.

DESCRIPTION OF DRAWINGS - The figure illustrates the installation of an application on a client computer.

ABSTRACT

PROBLEM TO BE SOLVED: To make it possible to add a memory card loaded with a flash memory as usual at the time of adding an optional program without distributing a CD-ROM.

SOLUTION: Two or more kinds of control programs to be optional programs are previously installed in an HDD built in an image forming device such as a copying machine and a printer and ciphered data are previously recorded in an SD card having inherent ID data. Arithmetic operation is executed by using the ID data of the SD card inserted into the device and prescribed functions and the allowance/inhibition of use of each control program is judged based on the operation result. When the ciphered data of the SD card is copied to another SD card, the operation is executed by the ID data of the other card and the ciphered data, so that a correct operation result can not be obtained and all the control programs are not validated.

ABSTRACT

PROBLEM TO BE SOLVED: To help a customer to plan reformation.

SOLUTION: A server 11 and a customer terminal 2 are connected together via the Internet 3. The server 1 has a customer management file F1 containing the contents of the installed products that the customer is currently using so that they are made to correspond to identification information and an article management file F2 which contains catalogs of providable products. When the server 1 is accessed by the customer terminal 2, the server 1 prompts the input of identification information via the customer terminal 2

and collects identification information inputted via the customer terminal 2 with the customer management file F1 to specify the installed products that the customer is using now. The server 1 select products suitable for reformation from the article management file F2 according to the specified **installed product** and further presents an **image** of the external appearance of the product selected from the article management file F2 via the customer terminal 2.

#### Alerting Abstract EP A2

NOVELTY - The system has server computers (51) maintaining a list of jobs related to an operation that is associated with **creation** of an **installed software image**. Client computers (52) communicate with the servers and accept one of the jobs from the server computers. The client computers execute the accepted job by performing the operation. The server and client computers maintain data structures indicating job availability and status.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

1.a method used in a distributed build environment

2.a data structure used in a distributed build environment.

USE - Used for distributed build environment to create a software image.

ADVANTAGE - The system allows a distributed build environment to have minimal configuration on the client computers and hence makes the reallocation and redistribution of client computers in a simple manner. The image build times are reduced significantly by adding additional imaging clients which increases client resource usage and efficiency. The system uses only a single computer to successively build each image, thus reducing the amount and cost of processing hardware. The system thus enables original equipment manufacturers and system builders to easily modify,

create, and image software in a factory, thus reducing resource consumption and time.

DESCRIPTION OF DRAWINGS - The drawing shows an exemplary block diagram illustrating communication between the clients and server computers.

50 Network system  
51 Server computers  
52 Client computers

#### **Alerting Abstract US A1**

NOVELTY - A configuration setting information is processed to determine configuration settings for a primary operating system in a file directory. The determined configuration settings is copied from the file directory to another file directory to which secondary operating system image is copied, so that the determined configuration setting is used by the secondary operating system.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

1.system for installing program components; and

generating image data and sending the image data to terminal equipment.

USE - Used for generating and processing an image data.

ADVANTAGE - The sending of image data that is generated by the scanner is controlled by CPU, thereby easily designating the computer. The system prevents the scanner from receiving the image data without users intention.

DESCRIPTION OF DRAWINGS - The drawing shows a diagram depicting a system configuration of a data processing system.

1 Image data processing system

### Alerting Abstract EP A1

NOVELTY - The system (1) has a scanner (2) with a CPU for generating an image data, where the CPU is configured to select personal computers (3,4,5a-5c), and an application software. The CPU sends a notice and image data of the selected application software to the selected computer. Another CPU in the computer receives the data from the scanner and processes the data by the selected software.

DESCRIPTION - An INDEPENDENT CLAIM is also included for a program product for causing a computer used as an image data generating apparatus for

**Alerting Abstract** US B1

NOVELTY - The method involves assessing a frequency with which hardware and **software is installed** on a computer. A static and dynamic installation **images are generated** for most frequently selected hardware and software. The images are developed for a configuration database to determine the appropriate image for the actual configuration ordered by the customer and are stored in a storage device of the computer.

DESCRIPTION - An INDEPENDENT CLAIM is also included for a system that uses the above method.

USE - Used for installing software on a computer to provide customers with wide choice of computer configurations.

ADVANTAGE - The installation improves the reliability while optimizing the required burn time and maximizes the throughput of a computer manufacturing facility.

DESCRIPTION OF DRAWINGS - The drawing shows a flow diagram of a computer in a built-to-order manufacturing facility.

#### Alerting Abstract US B1

NOVELTY - A preload image portion containing software for which a seller has redistribution rights, is created. A designated user is prompted for a location of additional software (304) for which the seller does not have redistribution rights but desires to have redistribution rights. A preload image portion that includes the additional software is created using an image utility (306).

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- 1.preload image creating apparatus; and
- 2.computer program product for creating preload image.

USE - For creating preload image for installation of **server network in data processing** system employed in business, **industry** and academic endeavors.

ADVANTAGE - Improves the phase of generating the preload image by merely prompting the reseller to specify the location of the remaining software without memory prompts.

DESCRIPTION OF DRAWINGS - The figure shows a conceptual view illustrating the process of creating preload image.

### Alerting Abstract US A1

NOVELTY - Each target computer (8) is enabled to select one of the image files (64) corresponding to hardware and software configurations of the computer, from a target storage medium (81) such as a hard disk. The selected image file is decoded to obtain the software bundle that is stored in the target storage medium.

USE - For installing software bundles such as operating system, hardware driver software and application software in computer.

ADVANTAGE - Permits simultaneous installation of software bundles on target computers with different hardware and software configurations in computer assembly line. Reduces downloading time of image files.

DESCRIPTION OF DRAWINGS - The figure shows the schematic view illustrating software bundle installation method.

**Alerting Abstract US B1**

NOVELTY - The components e.g. structured query language (SQL) server of a software suite, are queried by a set-up program to determine whether the components are required to create baseline installation image for the suite. The components are installed in the computer based on the determination result.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- 1.system for installation of software suite; and
- 2.computer readable medium storing software suite installation program.

USE - For installing group of related programs e.g. software suite such as back office server, including SQL server, exchange server, host integration server (HIS), proxy server, facsimile server, system management

server (SMS), management server (MS), Microsoft data access component (MDAC), Internet explorer, word processor, database and spread sheet, in computer system, hand-held device, microprocessor, microprocessor-based programmable consumer electronics, networked personal computer (PC), minicomputers and main frame computers through local area network (LAN), wide area network (WAN), Ethernet, synchronous optical network (SONET), digital subscriber line (DSL), T-1.

ADVANTAGE - Simplifies the suite installation process by eliminating the need to write different set-up procedure for each versions of components that is already installed.

DESCRIPTION OF DRAWINGS - The figure shows the flowchart explaining the software suite installation method.

#### **Alerting Abstract US A1**

NOVELTY - The input values corresponding to installation parameters of an installation package are obtained. The installation parameters to be subjected to remote validation are determined. The obtained input values corresponding to the determined parameters are transmitted to a remotely-located system for the remote validation. The result of the remote validation is used for building the package.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- 1.system for improving installation of software packages; and
- 2.computer program product for improving installation of software packages.

USE - For improving installation of software package in computer system

including laptop computer, hand-held or mobile computer, desktop computer and server/mainframe computer. Also for cellular phones, personal digital assistants (PDAs), dash-board devices in vehicle and other devices having computing or processing capabilities.

**ADVANTAGE** - Simplifies the installation process of software packages. Provides for consistent and efficient installation of software package across a wide variety of target installation environments.

**DESCRIPTION OF DRAWINGS** - The figure shows the flowchart of software package installation improving method.

**Title Terms/Index Terms/Additional words:** SOFTWARE; PACKAGE; INSTALLATION; IMPROVE; METHOD; COMPUTER; SYSTEM; TRANSMIT; OBTAIN; INPUT; VALUE; CORRESPOND; DETERMINE; PARAMETER; REMOTE; LOCATE; VALID

### Alerting Abstract KR A

**NOVELTY** - A method for installing and executing software using a virtual CD ROM drive and a virtual disk drive is provided to store the corresponding software as an image file type of the virtual CD ROM drive, and to store installation information and registry information of the same software as an image file type of the virtual disk drive, then to use the software without installing another software in a client PC, so as not to leave any marks of using and installing the software.

**DESCRIPTION** - If a server program is installed(S1), a system manager sets up the number of fairly-obtained software usage right licenses, and sets up a software simultaneous user metering function. The system manager stores software to be used as image file types of a virtual CD ROM drive in a server disk(S2). The system manager stores installation information of the software as image file types of a virtual disk drive(S3). If a client program is installed(S'1), a client PC or PC generates a virtual CD ROM drive. If a software user selects one of the software stored in the step S1, to execute the selected software, an image file of the selected software is inserted to the generated virtual CD ROM drive(S'2). The client PC generates a virtual disk to insert image files of installation

information of the software stored in the step S3 and registry information processed according to execution conditions of the selected software of the client PC, to execute the selected software(S'3). when completing the execution of the used software, the image file of the step S'2 is automatically removed(S4). The used software installation information and the registry information are automatically removed at the same time(S5).

**Title Terms/Index Terms/Additional words:** METHOD; INSTALLATION; EXECUTE; SOFTWARE; VIRTUAL; CD; ROM; DRIVE; DISC; MANUFACTURE; RIGHT; LICENCE; MANAGEMENT; PROGRAM

US 5604906	A	EN	12	9	

#### **Alerting Abstract US A**

To accelerate the process of installing software on a number of computers, an image is created with the same formatting as the target drive in each computer onto which the software is to be installed. A controller determines the manner in which target drives on the computers are formatted.

The image drive is then created with the same formatting, using the known target drives as a frame of reference. Once the image drive has been created and the desired software bundle loaded onto it, the software is installed on the computers from the image file, on a block-by-block basis, rather than using individual file transfer under the control of a higher level file management program.

ADVANTAGE - Transfer rate is increased.

## Acronis True Image 10 Home

### Key Features

Acronis True Image 10 Home provides the maximum flexibility to ensure you are adequately protected from unforeseen events such as viruses, unstable software downloads, and hard disk failure. You can create an exact copy of your PC for a full backup or backup only your important data and a choice!

You've accumulated a **lifetime of memories** on your home PC, in addition to important documents such as tax returns and resumes, not to mention all the applications you have installed. You can ensure each family member that took countless hours to set up. Acronis True Image 10 Home ensures that you are adequately protected; **ensuring that you can recover your precious** data or your computer hard disk is damaged by a virus.

**Disk Imaging** — Acronis True Image includes our patented disk imaging backup of your entire PC, including the operating system, applications, user settings, and hardware. In the event of a system or disk crash, virus attack or other fatal failure you can restore your entire system. No reinstallation is required!

**Backup your music, video, and digital photos** — Protect your digital memories. You can ensure your PC from a fatal system failure. With Acronis True Image you can ensure your digital data is preserved, even if your system fails.

**Outlook backup** — Create a backup copy of your e-mails, contacts, calendar, news folders, e-mail rules and user settings with just a few mouse clicks!

**Protect your applications** — Use Acronis True Image to restore all the settings of your applications. iTunes, Windows Media Player and dozens of popular applications!
